

MISSION 28

Protecting the Kingdom of Fungi

Fungi are **nature's great connectors.**
They move water, store carbon, feed
forests, and transform death into
new life.

Without fungi, there would be no
soil, no trees, no life as we know it.

A close-up photograph of several bright orange, honeycomb-shaped fungi growing on a dark, textured branch. The fungi have a distinct, porous, hexagonal pattern. The background is dark and out of focus, with some green foliage visible on the left. The text is overlaid on the bottom half of the image, with some words highlighted in a teal box.

Fungi are as **essential for our**
ecosystems as plants and animals,
and yet they are still excluded from
global conservation laws.

But in 2026, we have a rare chance to
change that, going all the way to the
United Nations.

This is our most ambitious mission yet.
Protecting fungi is protecting the
foundations of life on Earth.
