MISSION 42

We're

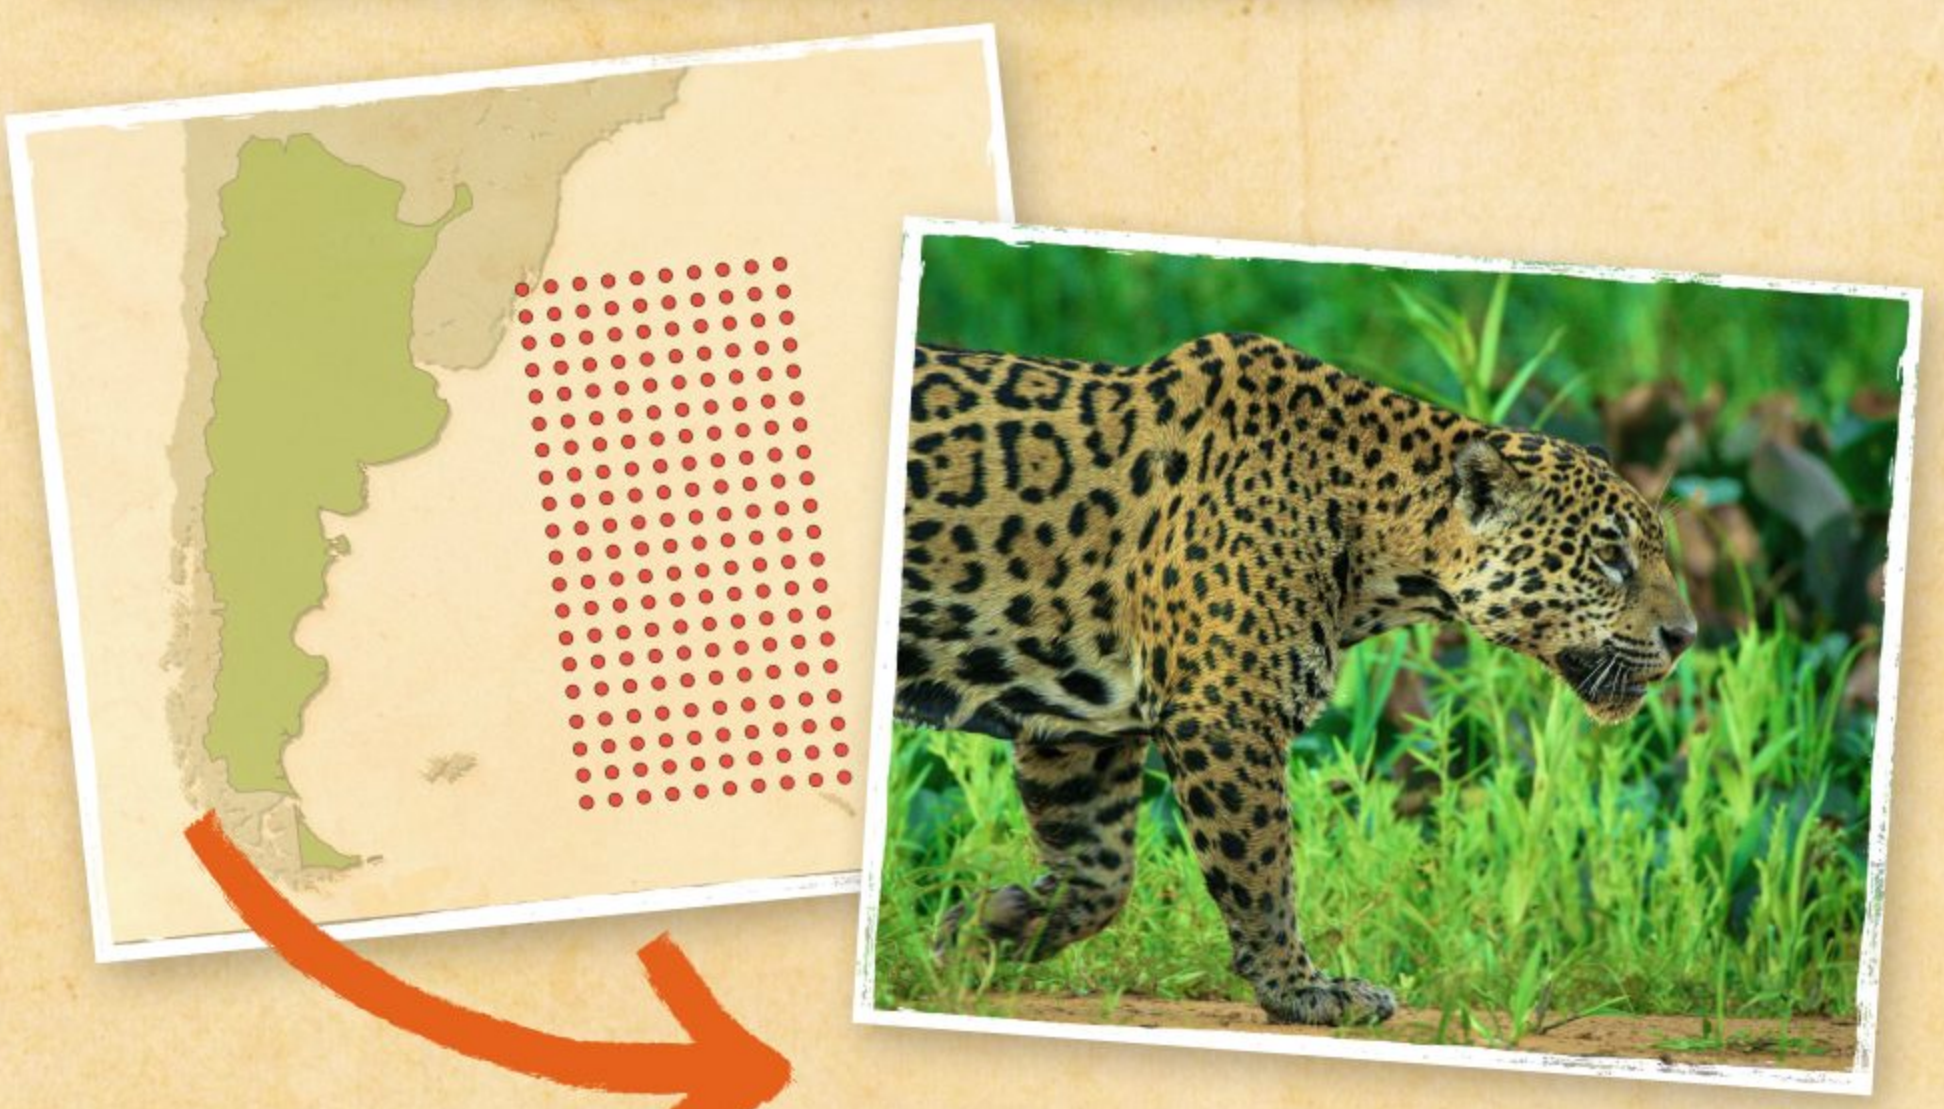

FLYING A JAGUAR

across Argentina

Meet Mimbi. She's a 20-month-old wild jaguar, born in the wetlands of Argentina's Ibera National Park. She is about to take a very unusual trip...

Today, Argentina has only 200 to 250 jaguars left.

They're split into small groups that can't reach each other. That isolation shrinks their gene pool. Over time, that leads to sickness, and can wipe out a population for good.

Mimbi can help fix that.

We've partnered with Rewilding Argentina to fly Mimbi 450 km across Argentina.

The destination is El Impenetrable:
a dense, dry forest that's perfect for her as an ambush predator.

It's also a region where new genes are critical to saving the local population.

The catch: Mimbi can't be sedated.

Anesthesia is too risky for a jaguar her size.

The team has **just 15 hours to get her there, by truck and plane**, before the trip becomes too stressful for her.

Planet Wild is funding Mimbi's entire journey, and what comes next.

✈️ Mimbi's translocation

👥 Staff salaries in both locations

📡 GPS collars to track jaguars like Mimbi

🤝 Work with local communities to boost peaceful coexistence

Our support gives Mimbi, and her species, a real chance to thrive again.
